HYDRAULIC Suction Strainers

A staple product that has been in our product line forever, it seems, is our hydraulic suction strainers. They are made for petroleum-based fluids and designed to be placed on the suction line to give added life to your pump. With the pump being the most important component in a hydraulic system, it is wise to protect it. They also can interchange with many other manufacturers' suction strainers. They are available with pipe sizes up to 3" NPT male and female, and with either a nylon or metal connector end.

Give us a call to see how we can help.

Let's Go to School!

HOW BAD CAN A FEW QUESTIONS ABOUT HYDRAULICS BE?

1. **True or False?** One gallon of fluid is equal to 321 cu. in.
2. **True or False?** Static energy is energy in motion.
3. **In a hydraulic system, _____**
 - A. pressure provides force
 - B. flow rate provides speed
 - C. both A and B
 - D. neither A nor B
4. _____ **is the distance a fluid travels** in a specified time.
5. **True or False?** Water that mixes with lubricants, increases the effectiveness of the lubricant.

Suction Screens

Ohio Fabricators' suction screens are used in the carpet cleaning industry, in disaster recovery, in the paint industry to strain and filter paint before it gets to the spray nozzle, as a vent or water screen in many wastewater and utility departments, and in chemical processing industries.

They are available with male and female NPT threads up to 3" and in mesh sizes from 4 to 200 mesh. They have a nylon end with stainless steel wire cloth epoxied into the nylon.
